

## Please Help Move FA Research *Forward* by *Donating Tumor Tissue*

Please contact Teresa Kennedy at the Fanconi Anemia Research Fund if you have a surgery scheduled. Teresa will tell you about:

National Disease Research Interchange (NDRI), the private repository for tissue that the Fund currently uses to collect and send FA tissue to FA researchers;

Knight Diagnostic Laboratories at Oregon Health and Science University (OHSU), for molecular testing on FA tumors to possibly identify an FDA-approved drug to target the specific cancer;

The *FA Courier*, the Fund's annual publication that contains the latest information about clinical trials and research opportunities;

The Fund's Clinical Trials Travel Assistance program to help FA patients with travel expenses when participating in certain clinical trials.

In addition to helping you set up the tissue donation paperwork, reviewing possible clinical trials and eligibility for travel assistance, Teresa will provide you with support and follow-up.
